Classroom things worksheets

Factors are numbers that are evenly distributed to another number, and the primary factor is a prime number. A factor tree is a tool that breaks down any number of primary factors. Factor trees are useful tools for students because they have a graphical representation of the primary factors that are divided into a particular number. Factor trees are called that because once created, they look like a tree. The following worksheets show students the practice of creating factor trees. For example, free printable products list numbers 28, 44, 99, or 76 and ask students to create a factor tree for each one. Some worksheets provide some primary factors and invite students to fill in the rest; others require students to create factor trees from scratch. In each section, the worksheet prints first with the same worksheet, which lists the answers to make the grading easier. D. Russell Learn how much students know about creating factor trees if you finish this worksheet first. This requires students to create all factors tree from scratch. Before students start this worksheet, tell them that there are often several ways to do this when counting numbers. It doesn't matter what numbers are used because they always have the same primary factors in the number. For example, the primary factors for 60 are 2, 3, and 5, as the example problem shows. D. Russell For this worksheet, students use a factor tree to find the prime numbers of each number listed. If students are struggling, this worksheet can help them learn the concept. This provides a few factors and students fill the rest provided empty spaces. For example, the first problem students are asked to find are the factors in the number 99. The first factor, 3, is listed for them. Students then find other factors, such as 33 (3 x 33), which further affects prime numbers 3 x 3 x 11. D. Russell This worksheet provides more help to struggling students in learning factor trees because it provides them with some of the primary factors. For example, the number 64 counts as 2 x 34, but students can make this number the primary factor of 2 x 2 x 17, because the number 34 can take into account 2 x 17. D. Russell This worksheet contains some factors that help students create factor trees. If students are struggling, explain that the first number, 86, can only count 43 and 2, because both numbers are prime numbers. In contrast, 99 can take into account 8 x 12, which can further affect (2 x 4) x (2 x 6), which may take into account additional factors in primary factors (2 x 2 x 2) x (2 x 3 x 2). D. Russell Complete the factor tree lesson with this work page, which also gives students factors related to each number. A further practice for students to fill out these worksheets is to let them find the primary factor in the numbers without factor trees. ThoughtCo uses cookies to provide a great user experience. With ThoughtCo, the accepts the use of cookies. A worksheet or sheet is a single page of a file created using an electronic spreadsheet program, such as Microsoft Excel or Google Sheets. A workbook is the name of an Excel file that contains one or more worksheets. When you open an electronic spreadsheet program, you load a blank workbook file that consists of one or more blank worksheets. Excel for Mac, Excel Online, and Google Spreadsheets. You can use worksheets to store, manage, and display data. The primary storage unit for data on a worksheet is a rectangular cell that is arranged with each sheet grid pattern. Each data cell is identifiable and sorted by the vertical column letters and horizontal numbers of the worksheet that create a cell reference, such as A1, D15, or Z467. Worksheet specifications for current versions of Excel are as follows: 1,048,576 rows per worksheet16,384 columns per worksheet17,179,869,184 cells/worksheetLimied number tab per file based on the amount of memory available on your computer Google Sheets: 256 columns per sheet400,000 cells per file200 worksheet per spreadsheet in both Microsoft and Google Sheets , each worksheet has a name. By default, worksheets are called Sheet1, Sheet2, Sheet3, and so on, but you can change those names. In Excel, you can use the following key combinations to switch between worksheets: Ctrl+PgUp (page up): Go rightCtrl+PgDn (page down): Move left to the left With a budget planner, you can breeze through bill payments without breaking a sweat and gain control of your finances knowing where your money is going and how how much you have to cover your costs. Budgeting helps you be more aware of your income and spending, so make sure you're spending in a way that supports your financial goals rather than wondering where the money went at the end of the month. If you've never planned before - or haven't done it in a while - follow this guide. Key steps for creating a budget: Identify and calculate fixed costs. Keep track of spending on variable expenses. Build your savings. You're going to have to pay off the debt. First, learn the details of how to make a monthly budget that fits into your net income, and then use this budget worksheet to start tracking your money. Fixed costs When planning a budget, there are two cost categories: fixed and variable. Fixed costs do not change from month to month and are not negotiated. This category includes absolute needs, such as housing, health insurance and transport, and often account for the largest part of the budget Don't miss: tricks that fear out your budget house is the most important part of it monthly budget to spend money on housing. Regardless of rent or mortgage, housing is likely to be the biggest monthly cost. Research by the Bureau of Labor Statistics found that Americans spend an average of \$17,000 to \$18,000 a year on housing, which works out to be between \$1,417 and \$1,500 a month. If you own a home, you should also include the cost of property tax when it comes to budgeting for housing costs. Health insurance Stay healthy is not free, so you must include the health care costs of the budget planner. Health care costs include your health insurance premiums if you don't cover your work - or if you topping up your coverage using private market insurance - as well as the cost of health care you don't cover for insurance and the money you spend on co-pays and deductibles. How much you spend on health care depends on your age, whether you're taking prescription drugs and how much insurance premiums cost. On average, these ages are 65-74 to spend the most - \$5,956 a year, or more than \$496 a month, according to the BLS. People between the age of 55 and 64 are not far away, spending an average of \$4,958 a year, which is about \$413 a month. Learn how to manage your money: The first thing you need to do with any paycheck delivery is if you're not among the lucky few who ride bikes or walk everywhere you need to go, your budget for transport is nearly as important as your budget for housing. Depending on your residential situation, your transportation costs may include a monthly subway pass, car payment, fuel or vehicle leasing costs. When planning a transportation budget, keep in mind that some components in this category are considered fixed, such as car payments, while others are different, such as gas. Overall, transportation costs Americans an average of about \$9,000 per year, the equivalent of \$750 each month. Related: Choose the right bank account for your variable costs Unlike fixed costs, the variable components of your budget vary from month to month depending on your lifestyle. Some variable costs are absolutely necessary, such as food costs, while others count discretionary spending as entertainment. Creating a budget will keep you from overspending on discretionary costs, so you have enough money for your needs. Food and food don't have a spending tracker full category without the food costs. Food accounting is a key part of the budget process and should include takeaway and restaurant visits. Do not forget about the cost of food that slips by you - like the latte paid in cash; a significant amount of expenditure in one year. Gen Xers and early baby boomers spend the most on food on average, according to the BLS - probably because the size of the family is greater than millennia. People between the age of 35 and 54 spend more than \$8,000 a year on food, an average of \$667 a month. Meet: Insider Grocery Store Hacks That'll Save You Money Utilities Although some utilities - like phone, internet and cable bills - are fixed, many shifts are month by month depending on the season. Gas and electrical bills, for example, fluctuate as you crank the air conditioning in the summer or heating in winter. Other utility costs to consider are water and trash services. The BLS reported that utilities cost Americans an average of nearly \$4,000 a year or \$333 a month. Entertainment and other extras Living on your budget doesn't mean you can't enjoy yourself, so you can include entertainment costs in your budget template to maintain balanced spending habits. The average U.S. entertainment spends about \$2,700 each year, which works out to \$225 a month. Discretionary costs can include movies, amusement parks, concerts or other activities to spend money purely for enjoyment. Other costs that are likely to work your way into your budget include personal care costs such as hair care and clothing. On average, clothing and personal care supplies cost \$2,430 a year, just north of \$200 a month. While you may not spend the same amount each month, putting aside your personal care allowance ensures that you will have the funds you need if you don't go to make a purchase. You also need to make room for your budget fitness, even if it's a discounted gym membership because staying healthy can save you money over time. Building savings and eliminating debt is one of the biggest advantages of money management getting general financial health because it plans spending to align with its financial goals. With this in mind, savings in the future will be financially secure key to any budget. As for retirement, start setting goals and savings as soon as possible. Online investment company Fidelity, for example, advises that there is 10 times the annual income saved by the time it reaches retirement age - however, more than half of Americans retire broke. The easiest way to make money away is to contribute to a 401k or individual pension account. In your monthly budget, deduct this money from your monthly income immediately, so don't think twice about spending that cash instead. Consider automating savings as part of your plan to build better money habit. Finally, you need to budget for debt reduction and possible debt elimination. The vast majority of Americans mortgage, student loans, credit card debt or all three are mortgaged. Just like you do with retirement savings, set aside a percentage of your income as soon as you receive your salary to put you toward eliminating the debt you might have. The same strategy could help create an emergency fund along with retirement savings that will act as a safety net if you encounter illness, job loss or any other financial crisis.
